*Build it once. Prove it forever.*

# 00 WELCOME TO THE BUILD OF RECORD

You already build to a standard. This playbook is about making that standard provable — capturing the work of your crews as it happens and binding it, permanently, to a living digital twin of the asset you help create.

Every general contractor we partner with shares one mission: to build a physical asset and hand it over as a blockchain-certified, cryptographically stamped record — a real-world asset that is as trustworthy in the database as it is on the site. The subcontractors who make that asset real are the ones who make the record real.

This handbook introduces the connected construction environment, the certification path that gets your team ready for it, and how your specific trade plugs in. It is written to outlast any single project — a shared reference for our teammates today and for every cohort that follows.

*We are not asking you to build differently. We are asking you to let the work speak for itself — permanently.*

// Forged in the Richmond cohort of the Strategic Partnership Program.

# 01 THE CONNECTED CONSTRUCTION ENVIRONMENT

In a connected construction environment, the physical build and its digital twin are never out of sync. As work is completed in the field it is captured, verified, cryptographically hashed, and written to the twin — so the model is not a drawing of what was planned, but a certified record of what was actually built.

## BUILD

Trades execute the work in the field.

## CAPTURE

Each contribution documented in a verifiable format.

## HASH & STAMP

A cryptographic seal fixes it to a moment in time.

## DIGITAL TWIN

The living model updates in real time.

## HANDOVER

The asset transfers as a verified RWA.

### THE OLD WAY

As-builts drift from reality. Disputes hinge on memory and paper. The model and the building disagree.

### THE CONNECTED WAY

The record is the reality. Every layer is sealed, attributed, and live — trusted by owners, partners, and the trades who built it.

# 02 THREE FOUNDATIONS

Before a single block is captured, every partner stands on three footings.

## F.01 — WHY IT MATTERS

### THE BUSINESS CASE

- Verified work ends disputes — your record is the proof.
- Fewer callbacks and less rework when the as-built is the source of truth.
- A permanent, portable portfolio of certified contributions.
- A seat in a network bidding connected, higher-value projects.

## F.02 — WHAT CHANGES

### THE OPERATIONAL MECHANICS

- Document work in a capture-ready format as you go.
- Each milestone is sealed and synced to the twin.
- No new paperwork burden — capture rides along with the work.
- One source of truth shared across every trade on site.

## F.03 — WHAT YOU NEED

### THE TECHNICAL FOOTING

- Shared data standards so every trade speaks the same language.
- Lightweight capture tools and agreed sensor touchpoints.
- A pre-build readiness check via the Blockchain Maturity Model.
- Guided onboarding — we bring you up to standard, together.

*Get the footing right, and everything built on top of it can be trusted.*

# 03 THE CERTIFICATION PATH

A gate, not a hurdle. It maps cleanly onto the project's delivery phases.

01

## BMM READINESS ASSESSMENT

We baseline your team against the Blockchain Maturity Model before any build begins.

PRE-BUILD GATE · Standards assessment

02

## ONBOARDING & STANDARDS

Shared data standards, roles, and capture conventions agreed across trades.

PHASE 1 · Discovery & Foundation

03

## CAPTURE PROTOCOLS

Your trade's specific capture points are configured and tested on site.

PHASE 2 · Build & Data Integration

04

## CERTIFIED PARTNER STATUS

Your contributions are sealed to the twin and credited to your firm.

PHASE 3 · Architecture & Token Framework

05

## CONTINUOUS SYNC & HANDOVER

Live updates through delivery, governance, and verified asset handover.

PHASE 4 · Integration & Delivery

// Gated delivery model adapted from the flagship Richmond headquarters engagement.

# 04 TRADE TRACKS

Find yours—then see what your work makes permanent.

## T.01

### INTERIOR FINISHES & FLOORING

**CONTRIBUTES** Material provenance, finish specifications, installation records.

**SEALED TO TWIN** What was installed, where, when, and to what spec.

**YOUR VALUE** Verifiable finish quality and a defensible record of craft.

## T.02

### SITE, LANDSCAPE & LIVING SYSTEMS

**CONTRIBUTES** Plantings, living-roof systems, site and environmental work.

**SEALED TO TWIN** As-planted records, growth baselines, environmental data.

**YOUR VALUE** Provable sustainability outcomes and workforce contributions.

## T.03

### STRUCTURAL & EXTERIOR ASSEMBLIES

**CONTRIBUTES** Decking, envelope, and exterior assemblies.

**SEALED TO TWIN** Structural documentation, materials, and weathering profiles.

**YOUR VALUE** A certified structural lineage that protects you for years.

## T.04

### SAFETY, COMPLIANCE & FIELD PROTOCOLS

**CONTRIBUTES** Safety protocols, inspections, and compliance events.

**SEALED TO TWIN** Time-stamped safety and compliance records.

**YOUR VALUE** An immutable compliance trail and a cleaner handover.

// Tracks are illustrative. Any trade can be onboarded to the connected environment.

# 05 A TOKENIZED REAL-WORLD ASSET

At handover, the asset is more than a building. It is a Digital Twin Token (DTT) — a tokenized real-world asset whose history, components, and certifications are written into a record no one can quietly alter.

That record includes your work. The seals your crews earned become part of the asset's permanent provenance — discoverable, verifiable, and yours to point to.

**≈ 1% TO PROTECT  
THE OTHER 99%**

The cost of certifying the asset is a fraction of the value it secures — for the owner, the general contractor, and every trade on the record.

15 E BROAD ST • RICHMOND VA

*Delivered with a governance manual and a board-ready  
demonstration environment.*

# 06 BECOME A CERTIFIED PARTNER

Three steps to join the connected environment—and stay in it.

01

## SAY YES TO THE BASELINE

Schedule your readiness assessment. No cost to start the conversation.

STEP ONE · Readiness

02

## ONBOARD WITH US

We configure your capture protocols and bring your team to standard.

STEP TWO · Onboarding

03

## BUILD ON THE RECORD

Earn certified status on the next project and join the network for what comes after.

STEP THREE · Certified

### WHAT WE PROVIDE

Readiness assessment · Onboarding & standards · Capture tooling & support · A credited place in every asset you touch.
